

SPPL-623: Delete Group Post API technical workflow documentation

Jira Ticket: [SPPL-623: BE | Analysis | Create technical workflow for Delete Groups Post API including data sources](#) **DONE**

- i** This page provides comprehensive information about the Post API for Delete Group on the Groups Page.

Supply Planning Post Delete Group API Details:

1. **Hosted URL:** <https://api.spln.cube<env>.toyota.com/<env>>
2. **API Name:** <HOSTED_URL>/v/1/1/sp/delete-group
3. **Path Param:** N/A
4. **Query Param:** N/A
5. **Method:** Post
6. **Authorization:** Bearer token (**required**)
7. **Lambda Name:** spln-<env>-delete-group-v1-1
8. **API Request Body:**

```
1 {  
2   "groupId": "group-uuid-1",  
3   "groupScenarioMapId": "grp_scenario_mp_id uuid",  
4   "userName": "Priyadarshini Gangone",  
5   "userEmail": "gangone.priyadarshini@toyota.com",  
6 }
```

9. API Response:

- o **Success response with status 200:**

```
1 {  
2   "message": "Successfully deleted the group."  
3 }
```

- **Error Response:**

- **any internal server error occurred with status 500:**

```
1 {  
2   "errorMessage": "Internal Server Error"  
3 }
```

- **any unauthorized error occurred with status 401 (Managed by the AWS API Gateway integrated Custom Authorizer):**

```
1 {  
2   "message": "Unauthorized"  
3 }
```

- **If request is in-valid with status 400:**

```
1 {  
2   "errorMessage": [<"ValidationError: validation error message">]  
3 }
```

- **List of possible validation error message:**

1. "ValidationError: Request body cannot be empty".
2. "ValidationError: userName is required and must be a string."
3. "ValidationError: userEmail is required and must be a string."
4. "ValidationError: groupScenarioMapId is required and must be a uuid."
5. "ValidationError: groupId is required and must be a uuid."
6. "ValidationError: Group doesn't exist."
7. "ValidationError: Updates cannot be made because at least one of the scenario simulations is not currently in draft status."

10. Table:

a. **group_scenario_mapper**

SP Delete Group API Workflow:

- **Technical workflow:**

- Description:
 - i. The Supply Planning user logs in to the application.
 - ii. After the user navigates to Groups page and clicks the delete option for a group, a request is sent to the SP delete group endpoint: **sp/delete-group** with below request body:

```
1 {  
2   "groupId": "group-uuid-1",  
3   "groupScenarioMapId": "grp_scenario_mp_id uuid",  
4   "userName": "Priyadarshini Gangone",  
5   "userEmail": "gangone.priyadarshini@toyota.com",
```

- iii. After successful authentication, the **spln-delete-group-v1-1** lambda is triggered by the SP delete group endpoint: **sp/delete-group**. If authentication fails, an error with status 401 (refer: error response-**any unauthorized error occurred with status 401**) will be returned and sent to client.
- iv. After user authentication has been confirmed, the **spln-delete-group-v1-1** lambda will perform validation on the request payload. If payload is valid will proceed to next step else throw validation error (refer: error response: **Section if request is invalid with status 400 and List of possible validation error message**).
- v. After the request payload is successfully validated, the **spln-delete-rundown-v1-1** lambda execute below query to delete group in the group_scenario_mapper table:

```

1 update table supply_planning.group_scenario_mapper
2 set is_active = false
3 where grp_scenario_mp_id = :groupScenarioMapId and group_id = :groupId
4 and is_active = true
5 returning grp_scenario_mp_id;

```

If grp_scenario_mp_id was not returned, throw validation error (6).

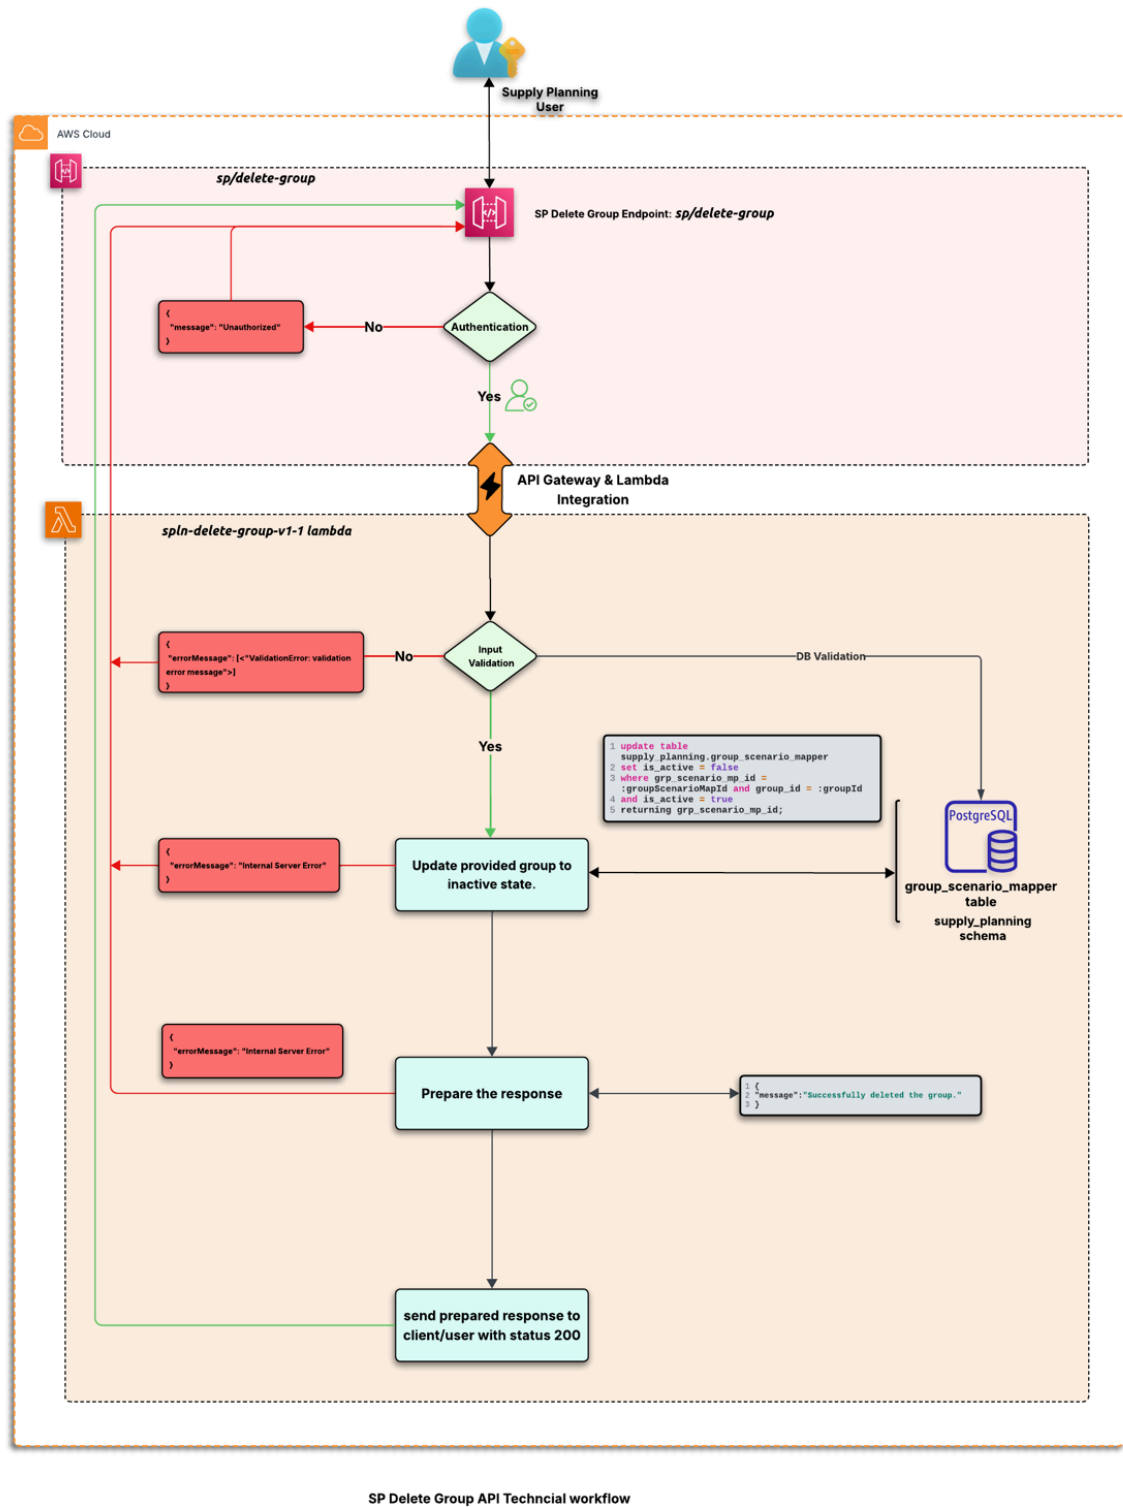

- vi. After updating the group data, return the below response to the client with a status code of 200:

```

1 {
2   "message":"Successfully deleted the group."
3 }

```

- vii. If there is an error while updating the data, an “Internal Server Error” with a status code of 500(refer: error response-**any internal server error occurred with status 500**) will be returned. Otherwise, a successful response with a status code of 200 will be sent.

SP Delete Group API Technical workflow

Note:

We will be utilizing this API for single group deletion.
